DETAILED ACTION

The following action is in response to the amendment received May 6, 2005.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 3-7, 10-12, 16, 17, and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear from claims 1, 16, and 17 whether the friction lining has a spring characteristic and has an area that is raised in comparison to the planar surface or the friction surface has an area that has a spring characteristic that is raised in comparison to the planar surface. Claim 11 is further indefinite because it is unclear what is meant by "formed in the manner of a spacer".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/617,461

Art Unit: 3681

Claims 1, 4-6, 10-12, 16, 18, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Bjerk et al. ('085). The Bjerk et al. device discloses a disk having a core plate 56 and a friction lining 58 having areas 60 of the surface having a spring characteristic raised in comparison to the essentially planar surface of the disk, wherein the raised areas are compressed upon engagement to be in essentially the same plane as the essentially planar surface. The friction lining has multiple component pieces 58, 59. The Bjerk et al. device is for use in a wet disk clutch.

Claim 20 is further rejected under 35 U.S.C. 102(b) as being anticipated by Loeffler('360). Loeffler discloses a friction lining having an essentially planar surface having at least one area c' that is raised in relation to the planar surface, the raised area having a spring characteristic. The raised area is designed to be displaced to be substantially in the same plane as the planar surface.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 3681

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3, 7, and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bjerk et al. ('085) in view of Loeffler ('360). The Bjerk et al. device does not show the grooves called for in claims 3 and 17. Loeffler discloses grooves c surrounding the raised areas. It would have been obvious to provide grooves in the Bjerk et al. device the motivation being to aid in deflection of the material. Claim 7 calls for the core plate forming the raised areas. This is also taught by Loeffler.

Claims 13, 14, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bjerk et al. ('085) in view of Gannon ('611). These claims call for the raised area increasing in thickness in a radial direction. Gannon suggests providing a friction lining increasing in thickness in the radial direction. It would have been obvious to carry this teaching to the Bjerk et al. device, the motivation being to provide initial engagement at the outer periphery for increased initial engaging surface.

Application/Control Number: 10/617,461

Art Unit: 3681

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rodney H. Bonck whose telephone number is (571) 272-7089. The examiner can normally be reached on Monday-Friday 7:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles A. Marmor can be reached on (571) 272-7095. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
